The end of the world as all had known it was slow in developing, but took little time at all to settle in full. One day can and will change the world, or even begin its course of destruction.

But what happens when it is solely the young and most defense who are targeted, when those meant to be their protectors have become the greatest threat of all? When a company associated with chemical warfare has its most dangerous experimental chemicals accidentally released into the public atmosphere, the effects upon the adult human brain are devastating. Almost immediately American adults, and in particular parents, begin to behave with extreme aggression and violence towards children. As the deaths began to mount, child and teenage survivors are left to ban together, hiding, fleeing, and all too often fighting for their lives- against the hands of those who were supposed to love and defend their safety the most. Violent Instinct is a harrowing look at the physical, emotional, and psychological deterioration that can occur in a society without rules and safeguards, without even the most basic protection of its most vulnerable members. With its vivid characterization, intent pacing, and thoughtful yet occasionally humorous tone, Violent Instinct will remain in readers' thoughts long after its closing words.
